ABSTRACT

This annotated bibliography, compiled in an effort to improve the dissemination of linguistic information, provides information about 53 working papers series. It is the result of responses to questionnaires sent out during the past year. Most of the inquiries were made at institutions within the United States, but a few entries from other countries are included. Each citation indicates the subject areas covered by the particular series, its intended audience, frequency of issue, price, and availability. (PMP)

[*Dr. Shopen is on the senior staff of the Center for Applied Linguistics.*]

This bibliography has been compiled in hopes of improving the dissemination of information in linguistics. The entries which appear below resulted from responses to questionnaires sent out during the past year. We made most of our inquiries at institutions within the United States, and so have only a very incomplete sampling from other countries. The Center for Applied Linguistics plans to do an update to this bibliography some time in the fall and would welcome comments from readers, especially as to any additions they would care to suggest.

The dissemination of information in linguistics takes place in many ways, and the publication of books, reviews, and articles is only one of these. It is often pointed out that the time lag between conception of an idea and its publication, even in the best of circumstances, sometimes renders such an idea obsolete by the time it reaches print. To illustrate how much ideas travel by means other than publication, one need only point to the sense of isolation that can be felt by linguists who do not have many other linguists to talk with, even when they receive all the relevant journals and have an excellent library at their disposal. An enormous amount of communication takes place by word of mouth. One eminent linguist recently remarked that he has on the order of fifteen to twenty articles to finish which so far have been presented to the public only through oral presentations at conferences and meetings held during the past few years. The summer institutes of the Linguistic Society of America have served as an excellent forum for the presentation of ongoing work, but the decrease in funds available for travel by students and faculty to such institutes and other meetings has dealt a severe blow to the dissemination of linguistic information.

It is in this context that working papers render an extremely useful service. Important research results which have gotten to the stage of being written up, but which, for one reason or another, the author deems incomplete or uncertain enough for formal publication, can be made available to others in the profession through the media of working papers. In most cases, working papers are reproduced by mimeograph or by an inexpensive offset process, thereby allowing for fairly rapid dissemination. The major drawback is that they tend to be circulated only to the best known linguistics departments and to individuals and groups with whom the authors and editors have personal acquaintance. Copies are usually available, however, to those who request them, but one has to be aware of their availability in the first place. This bibliography is meant to remedy that situation.

Thanks are due to Patrice Walker and Margaret Good for the work they did in gathering this information.

CAL·ERIC/CLL SERIES ON LANGUAGES AND LINGUISTICS

ERIC (Educational Resources Information Center) is a nationwide network of information centers, each responsible for a given educational level or field of study. ERIC is supported by the National Institute of Education of the U. S. Department of Health, Education, and Welfare. The basic objective of ERIC is to make current developments in educational research, instruction, and personnel preparation more readily accessible to educators and members of related professions.

The ERIC Clearinghouse on Languages and Linguistics (ERIC/CLL), one of the specialized clearinghouses in the ERIC system, is operated by the Center for Applied Linguistics. ERIC/CLL is specifically responsible for the collection and dissemination of information in the general area of research and application in languages, linguistics, and language teaching and learning.

In addition to processing information, ERIC/CLL is also involved in information synthesis and analysis. The Clearinghouse commissions recognized authorities in languages and linguistics to write analyses of the current issues in their areas of specialty. The resultant documents, intended for use by educators and researchers, are published under the title CAL·ERIC/CLL Series on Languages and Linguistics. The series includes practical guides for classroom teachers, extensive state-of-the-art papers, and selected bibliographies.

The material in this publication was prepared pursuant to a contract with the National Institute of Education, U. S. Department of Health, Education, and Welfare. Contractors undertaking such projects under Government sponsorship are encouraged to express freely their judgment in professional and technical matters. Prior to publication, the manuscript was submitted to the Center for Applied Linguistics for critical review and determination of professional competence. This publication has met such standards. Points of view or opinions, however, do not necessarily represent the official view or opinions of either the Center for Applied Linguistics or the National Institute of Education.

This publication will be announced in the ERIC monthly abstract journal Resources in Education (RIE) and will be available from the ERIC Document Reproduction Service, Computer Microfilm International Corporation, P. O. Box 190, Arlington, Virginia 22210. See RIE for ordering information and ED number.

For further information on the ERIC system, ERIC/CLL, and the CAL·ERIC/CLL information series, write to ERIC Clearinghouse on Languages and Linguistics, Center for Applied Linguistics, 1611 North Kent Street, Arlington, Virginia 22209.
